

Highlights

- Advanced security features that include:
 - Controlled project access
 - Timesheet approvals
 - Purchase requisition approvals
 - Selective company access
- Clear, reliable audit features in every module
- Effective error tracking that assists technical support
- Impressive browses and inquiries in every module. All detail can be viewed in a window or output to a printer
- Exceptional data integrity, including built-in optimization for data performance
- Dozens of dynamic reports and listings with extensive options
- Cross modular with seamless integration between modules
- Optional add-on modules:
 - Standalone Timesheet Entry
 - Canadian Payroll
 - Purchasing
- Multi-user, multi-company and multi-currency to 99 banks
- Practical support options, training and customization available

System Overview

Aspire Project Suite is a complete solution to the challenges of project and business management. Designed for the small to medium sized business, this product is ideal for *project-oriented resource, material and expense recording*. Engineers, architects, consultants, professionals and service organizations can benefit from the *exceptional flexibility* of Aspire Project Suite.

Consisting of Project Costing, General Ledger, Accounts Payable and Accounts Receivable, Aspire Project Suite is *fully integrated*, essential for a product supporting all aspects of the business. Canadian Payroll, Timesheet Entry and Purchasing modules can be added at any time.

The *multi-dimensional security* in Aspire Project Suite makes it easy to establish the level of control you want. Configure access to modules, features and functionality. Password change, expiry control and e-mail notifications are just some of the options available.

In addition to module level security, *selective company access control* is available when you want to allow users to work with some but not all companies. The *enhanced security options* are responsible for controlled project access in Project Costing, and for defining approver and project manager profiles for timesheet and purchase requisition approvals in the Standalone Timesheet Entry and Purchasing modules.

The *audit ability* of information is a primary focus in the design of Aspire Project Suite. This is a critical feature for effective project and business management. Transaction history is clear, accessible and reliable, with batch control, reconstruction listings and drill downs right back to the original entry. Most reports and inquiries show cross referenced data for interfacing modules. All transactions are tagged with the user id, date and time.

The more than 150 *dynamic reports* in Aspire Project Suite contain extensive sorts, formats and selection criteria. All reports can be viewed in a window or output to a printer. *Powerful inquiries* are informative and concise, with all relevant information accessible in one location and detail that tracks back to transaction level. Additional summaries, statistics and totals enhance the value of these inquiries.

Aspire Project Suite data is *cross modular*. Reports, inquiries and data entry windows support the integration with browses, list boxes and searches that make interfacing modules work in unison. This underlying data sharing capability requires no additional steps and no importing or exporting of information.
